Key highlights

for the half year ended 31 March 2026

Nutun South Africa and Nutun International remain customer-centric solution providers. Each has a clearly defined target market, an established client base, a streamlined operating structure and an experienced management team. These strengths support their positions in the South African collections and recovery market and the South African business process outsourcing ("BPO") offshoring sector.

Nutun South Africa focuses exclusively on collections and recovery services for clients in South Africa, both as a principal through the acquisition of unsecured non-performing loan ("NPL") portfolios and as an agent on behalf of clients in the financial services, specialist lending and retail sectors.

Nutun International specialises in BPO customer engagement services, including customer acquisition and retention, customer experience, and collections and recovery services for clients located in the United Kingdom, the United States and Australia. These clients operate mainly in the utilities, financial services, retail, telecommunications and e-commerce sectors. Growth is targeted in market segments where the business has entrenched expertise and can deliver innovative, value-added services that differentiate it from competitors.

Performance – core continuing operations

Refer to the segmental information in note 7 of the unaudited financial statements for the half year ended 31 March 2026 for the reconciliation to the IFRS disclosure.

Key Performance Indicators (Rm)	**Half year ended 31 March 2026 ("H1 2026")**	Half year ended 31 March 2025 ("H1 2025")	Change

Key highlights continued
for the half year ended 31 March 2026

Performance – core continuing operations continued

Continuing core earnings improved to a loss of R63 million from a loss of R71 million in H1 2025, primarily due to:

Nutun South Africa

- PBD collections improved by 28% to R773 million impacted by PBD acquisitions in the second half of FY 2025 of R593 million and in the first half of FY 2026 of R382 million. Collections were also favourably impacted by enhanced collection methodologies despite the continued subdued economic environment and more recent geopolitical uncertainty.
- RTC revenue improved by 27% to R116 million impacted by acquisitions in the second half of FY 2025 of R77 million and in the first half of FY 2026 of R28 million, in addition to the collections enhancements noted above.
- Agency commission and associated fee revenue declined by 15% to R159 million following the continued strategic shift to focus on larger, scalable and more profitable mandates resulting in fewer clients.
- Other income decreased by R31 million to R4 million due to the termination of the Mobalyz management fee and a gain on lease modification in the prior period.
- Operating costs decreased by 14% to R341 million driven by ongoing cost optimisation, primarily through headcount reductions.
- EBITDA improved by 36% to R710 million, demonstrating the strong growth in Nutun South Africa's cash generation.
- Portfolio amortisation costs increased by 41% to R597 million driven by portfolio ageing and macro-economic factors linked to interest rates, inflation and consumer health & payment behaviour.
- Net interest costs decreased by 7% to R203 million, reflecting the repo rate cuts from November 2025 and tight treasury management.

Nutun International

- Revenue and other income decreased by 1% to R559 million due to the adverse impact of average exchange rates for the period of R27 million offset by a growth in billable seats from existing and new clients. Closing billable seats grew by 20% to 2,491 with the client base growing to 36.
- Operating costs increased by only 2% due to ongoing cost optimisation despite a R19 million adverse impact of the translation of balance sheet items and a loss on a foreign currency hedge in addition to increased head count due to the increase in billable seats.
- EBITDA decreased by 15% to R80 million, mainly as a result of the adverse foreign exchange impacts of R46 million as noted above.

Refer to the group continuing core results on page 4 for a reconciliation of continuing core earnings to continuing headline earnings to continuing basic earnings.

Performance – group including discontinued operations

	Unit	H1 2026	H1 2025

Basic loss per share from total operations	cents	**(8.1)**	(8.2)

Key highlights continued
for the half year ended 31 March 2026

Operational update and outlook

The simplified group is focused on two priorities. The first is profitability over the short-to-medium term. The second is sustainable high-quality growth over the long term.

Operational performance during the period was strong, particularly for Nutun South Africa. Earnings were however adversely affected by Rand strength and accelerated amortisation driven by forward looking macro-economic assumptions including an elevated interest rate forecast relative to our expectations.

- ## Balance Sheet and Liquidity

  The group's funding covenants are comfortably complied with and have approximately R0.8 billion in unutilised facilities as 31 March 2026.

- ## Nutun South Africa

  The business continues to streamline its operations, simplify its client approach and optimise its collections framework and associated technology infrastructure. It has been able to invest in PBD and RTC portfolios at healthy returns during the period. The ongoing acquisition of PBD and RTC portfolios on healthy commercial terms, combined with the acceleration of amortisation of older books, continues to improve the embedded discount rate within the portfolio which will enable higher profitability in future years. The improvement in the macro environment however remains uncertain.

  The outlook remains positive, with confidence that the business will continue to build on the strong collection performance trend and achieve its book buying objectives over the medium term, as supported by rigorous credit and risk mitigation policies performed throughout the valuation and acquisition processes. The demonstrable, albeit early-stage, success that the business has seen from the rollout of its Agentic AI solutions, which cover both interactive voice engagement and call insight analytics across its PBD portfolio and which leverage off a sizable data repository relating to consumer payment behaviour and health, will enable the business to accelerate the use of the proven technology into the remainder of its collection universe further enhancing the efficiency, effectiveness and profitability of its architecture.

- ## Nutun International

  While the business grew its billable seats during the period the Rand strength exerted significant pressure on margins, the AI impact on contact centers started to drive down some inbound customer demand, and the current geopolitical environment continues to drive foreign exchange volatility. The BPO market remains highly competitive globally and the majority of growth continues to come from existing client mandates. Operational service delivery, driving efficiencies and demonstrating practical innovation remains a key driver of client acquisition and retention.

  Nutun International continues to focus on diversification of its services to handle more complex matters, specifically focusing on providing end-to-end services in the recoveries space, benefitting from the Nutun South Africa experience and technology. Geographically, the group is investing for growth in the United Kingdom and United States. Short and medium term risks include the continued Rand strength exerting pressure on margins and uncertainty regarding the future of the Department of Trade and Industry incentives, which support the BPO industry.

  We have used the learnings from our South African business and commenced an AI and automation strategy across our operational platforms, which will yield measurable improvements in workforce productivity and cost efficiency. Through the deployment of AI-enabled tools in quality assurance, workforce management, people orchestration and certain customer facing functions, we are reducing our payroll-to-revenue ratio while simultaneously improving the proportion of billable advisors relative to non-billable support headcount. These structural efficiencies are expected to deliver sustained reductions in operating costs, including lower technology subscription expenditure, reduced physical infrastructure requirements, and an improved cost-to-serve per transaction.

  Management is confident that the progressive integration of AI into our service delivery model will enhance operating margins and strengthen our competitive positioning as a technology-led BPO partner of choice.

- ## Technology and AI

  The early but tangible benefits that AI can have on the group, as referred to above in both Nutun South Africa and Nutun International, are evident and investment will continue in this area.

Dividend

As communicated in FY 2023, cash dividends have been suspended, with no cash dividend being declared in the current period.

Key highlights continued
for the half year ended 31 March 2026

Basis of preparation

The condensed consolidated financial results for the six months ended 31 March 2026 have been prepared under the supervision of Robert Huddy CA(SA). The financial information on which this announcement is based has not been reviewed and reported on by Nutun Limited's auditors. The condensed consolidated financial results for the six months ended 31 March 2026 have been prepared in accordance with the JSE Listings Requirements, International Financial Reporting Standards IFRS Accounting Standards including IAS 34 – Interim Financial Reporting, the SAICA Financial Reporting Guides as issued by the Accounting Practices Committee and Financial Pronouncements as issued by the Financial Reporting Standards Council as well as the requirements of the Companies Act, 71 of 2008. The accounting policies applied in the preparation of the condensed consolidated financial statements for the six months ended 31 March 2026, are in accordance with IFRS Accounting Standards and are consistent, in all material respects, with those detailed in Nutun Limited's consolidated financial statements for the 2025 financial year. Any forecast financial information has not been reviewed or reported on by the company's auditors.

Group continuing core results

Nutun assesses its performance using core continuing earnings, an alternative non-IFRS profit measure, alongside IFRS profit. Non-IFRS measures are not uniformly defined nor used by all entities and may not be comparable with similarly labelled measures and disclosures provided by other entities. Management considers that core continuing earnings is an appropriate alternative performance measure to enhance the comparability and understanding of the financial performance of the group. The group has set out its policy to calculate core continuing earnings below.

Nutun calculates headline earnings in accordance with the latest SAICA Circular 1/2023 'Headline Earnings'.

Core continuing earnings is calculated by adjusting headline earnings for the following:

- Once-off transaction costs which are directly attributable to corporate activity (primarily legal and consulting fees).
- Adjustments on put and call options over non-controlling interests, namely imputed interest on the put option liability, re-measurements of the put option liability and fair value adjustments on the call option derivative.
- Once-off or accelerated items, where these are reasonably expected not to re-occur in the ordinary course of business in future reporting periods.
- Adding back specified headline earnings exclusions, if the gain/loss is considered part of Nutun's normal operations.

These adjustments are considered annually based on the transforming nature of the group. Management is responsible for the calculation of core continuing earnings and determining the inclusions and exclusions in accordance with the policy.

The reconciliation of continuing basic loss, continuing headline loss and core continuing loss is as follows:

Rm	Notes	H1 2026	H1 2025
Continuing basic and headline loss		**(63)**	(122)
Transaction costs	1	**-**	4
Impairment of financial assets held by an associate	2	**-**	47
Core continuing loss		**(63)**	(71)

Note 1: Once-off costs incurred in relation to the restructuring of the group's funding arrangements during FY 2025.

Note 2: Impairment of financial assets that are held by TC Global Finance.

The reconciliation of discontinued basic loss, discontinued headline loss and core discontinued loss is as follows:

Rm	Note	H1 2026	H1 2025
Discontinued basic earnings		**-**	58
Profit on disposal of Nutun Transact		**-**	(71)
Discontinued headline loss		**-**	(13)
Transaction costs	1	**-**	13
Core discontinued loss		**-**	-

Note 1: Once-off costs incurred in relation to the disposal of Nutun Transact during FY 2025.

Notes to the condensed consolidated financial statements

for the half year ended 31 March 2026

1 Purchased book debts

Purchased credit-impaired financial assets (principal book portfolios) are those that, at the date of initial recognition (acquisition), are credit-impaired. The group purchases its portfolios at a deep discount that reflects the incurred credit losses.

Principal book portfolios are portfolios of written-off consumer debts purchased at prices below the nominal receivable amounts. Principal book portfolios are reflected at amortised cost on a portfolio basis. Cost includes amounts payable to the vendor and other direct acquisition costs. Principal book portfolios reflected below include cumulative changes in lifetime expected credit losses since acquisition as a loss allowance. The amount of the change in lifetime expected credit losses is reflected as an impairment gain or loss in profit or loss. Favourable changes in lifetime expected credit losses (where collections on portfolios are expected to outperform the collections expected when the portfolios were acquired) are recognised as an impairment gain even if the lifetime expected credit losses are less than the value of expected credit losses that were included in the estimated cash flows when acquired.

Other financial assets relate to purchased book debt contracts where Nutun does not have title of the underlying portfolio. The portfolios include non-performing accounts held by South African banks and credit providers. Nutun's return on the portfolio is driven mainly by its collection activities and performance. Nutun has no recourse to the banks or credit providers. Under certain circumstances, the titleholder may retract some of the underlying accounts and dispose thereof to third parties with Nutun being entitled to a portion of the proceeds. The terms of these contracts therefore do not give rise to cash flows that are solely payments of principal and interest as it is not consistent with a basic lending arrangement. Accordingly, these purchased book debts are measured on a fair value basis. Refer to note 6.3.

6 Financial risk management

6.1 Credit risk

Credit risk is the risk of loss arising from the failure of a client or counterparty to discharge an obligation to the group. The primary credit risks that the group are exposed to as at 31 March 2026 relate to the risks associated with the purchased book debts, if the books fail to perform in accordance with estimate net future cash flows. Trade receivables include receivables from clients that have standard 30-day terms. The clients are diversified across numerous industries and geographies and do not result in significant concentration risk. It is not the group's strategy to avoid credit risk, but rather to manage credit risk within the group's risk appetite and to earn an appropriate risk-adjusted return.

The group limits its counterparty exposure arising from money market instruments by dealing only with well established financial institutions of high credit standing. Deposits are limited to the big five banks within South Africa.

Credit risk management and measurement

Each subsidiary is responsible for the identification, measurement, management, control and reporting of credit risk within their business units. Exposure to credit losses is managed by collectability of purchased book debts. Impairments are monitored and provided for using statistical techniques including experiential and behavioural models. These models are based on customers' financial performance information while on book and assume that recent performance is a strong indicator of future performance. In the case of key asset classes, independent models are developed to monitor the robustness of the primary models relative to actual performance and to optimise their effectiveness. Models are either developed internally or by expert external advisors.

The group assumes that the credit risk on a financial instrument has not increased significantly if the financial instrument is determined to have a low credit risk at the reporting date.

Measurement of expected credit losses (ECL)

The group measures ECL of a financial instrument in a way that reflects:

- An unbiased and probability-weighted amount that is determined by evaluating a range of possible outcomes;
- The time value of money; and
- Reasonable and supportable information that is available without undue cost or effort at the reporting date about past events, current conditions and forecasts of future economic conditions.

The maximum period considered when measuring ECL is the maximum contractual period (including extension options) over which the group is exposed to credit risk, and not a longer period, even if that period is consistent with business practice.

The measurement of ECL is a function of the probability of default (PD), loss given default (LGD) and exposure at default (EAD). The assessment of the probability of default and loss given write-offs is based on historical data adjusted by forward-looking information as described above.

As for the EAD for financial assets, this is represented by the assets' gross carrying amount at the reporting date and other relevant forward-looking information.

For financial assets, the ECL is estimated as the difference between all contractual cash flows that are due to the group in accordance with the contract and all the cash flows that the group expects to receive, discounted at the original effective interest rate.

6.1 Credit risk continued

Purchased book debts

Investment process

Prior to the acquisition of purchased book debts (PBDs), there is a defined investment process that is followed in accordance with guidelines determined by a constituted investment committee. PBDs are acquired from various credit providers in multiple sectors. Valuations are determined by projecting the present value of anticipated monthly collections, net of directly attributable collection costs, using past performance characteristics applicable to similar PBDs. Said valuations are ultimately presented to the investment committee to decide upon pricing and bidding strategy.

Collections process

The Insights, Data & Enterprise Analytics (IDEA) team continually develops and recalibrates insights and analytics used by operations to optimise the collection processes, and infrastructure, associated with non-performing debt collected.

Method of provisioning and fair valuing

PBDs are classified as purchased credit-impaired (POCI) financial assets (stage 3) on initial recognition based on the presumption that events that have a detrimental impact on the estimated future cash flows of these financial assets have occurred before acquisition and initial recognition. The classification of PBDs does not change subsequent to initial recognition, even in the unlikely event of the expected cash flows associated thereto returning to full contractual terms.

Any changes in lifetime expected credit losses (ECLs) are recognised in profit or loss. The group recognises favourable changes in lifetime ECLs as an impairment gain, even if lifetime ECLs are less than the amount of ECLs that were included in the estimated cash flows on initial recognition.

Nutun utilises statistical techniques and models to value PBDs on a monthly basis. Each PBD is modelled based on the collection activity applied to it. A combination of inflows applicable to each PBD and the direct, activity-based, cost projections applicable thereto are used to determine a net cash flow over a rolling 12-month period, which is subsequently discounted to present value using a credit-adjusted effective interest rate to determine its amortised cost value. The weighted average credit-adjusted effective interest rate at period end is 19.2% (31 March 2025: 17.9%; 30 September 2025: 18.4%).

Other financial assets, recognised within the purchase book debts, include a receivables balance measured at fair value. The valuation technique applicable thereto calculates the present value of all future cash flows associated thereto net of all associated costs.

Carrying value of purchased book debts

The Nutun South Africa business model continues to gain relevance as slow economic growth drive up indebtedness and impair consumers' ability to service their debt, leaving consumer facing entities with significantly larger non-performing loans (NPL) portfolios to manage. These impairment model parameters have been applied in determining expected cash shortfalls arising from non-payment in the best estimate provision on the loan book as at 31 March 2026. These books are not subsequently managed based on the credit risk rating but rather on a cash collection basis.

* The expected credit loss (ECL) on trade receivables is shown per the maturity of trade receivables. No separate classes of trade receivables have been identified. Receivables originate from contracts with customers across various industries and geographies however credit risk is managed by reference to past default experience of the debtor and analysis of the debtor's financial position, adjusted for factors that are specific to the debtors, and an assessment of both the current as well as the forecast direction of conditions at the reporting date. This disclosure was presented for the first time in the annual financial statements for the year ended 30 September 2025 in order to enhance the overall presentation of the financial statements.

** The comparative disclosure for 31 March 2025 has been presented for the first time to enhance overall disclosure.

6.2 Currency risk

Currency risk is the possibility of incurring a financial loss as a consequence of the depreciation in the measurement currency relative to a foreign currency prior to payment of a commitment in that foreign currency or the strengthening of the measurement currency prior to receiving payment in a foreign currency.

The foreign currencies to which the group has material exposure are US Dollar and British Pound. The exposure largely relates to foreign currency denominated receivables which are realised in 60 days, in line with the credit terms and are therefore subject to currency fluctuations. Expenses incurred are largely denominated in the functional currency of the entities to which they relate.

During the current period, Nutun entered into foreign exchange contracts for the purposes of hedging the exposure to the USD and GBP receipts for the Nutun International segment.

The following significant exchange rates were applied during the period:

	Average rate			Reporting date closing rate

British Pound	**2**	16	1	**111**	84	78
Australian Dollar	**–**	–	–	**–**	6	1

* Assets held in foreign currency relate to receivables of R207 million (31 March 2025: R171 million; 30 September 2025: R190 million) and bank balances of R27 million (31 March 2025: R19 million; 30 September 2025: R27 million).

6.3 Fair value disclosure

Fair values of financial instruments carried at amortised cost

The fair value of a financial instrument is the price that would be received to sell an asset or paid to transfer a liability between market participants at the measurement date.

The best evidence of the fair value of a financial instrument at initial recognition is the transaction price (i.e. the fair value of the consideration given or received) unless the fair value of that instrument is evidenced by comparison with other observable current market transactions in the same instrument (i.e. without modification or repackaging) or based on a valuation technique whose variables include only data from observable markets.

The method of determining the fair value of financial instruments is analysed into the following categories:

Level 1 Unadjusted quoted prices in active markets where the quoted price is readily available and the price represents actual and regularly occurring market transactions on an arm's length basis.

Level 2 Valuation techniques using market observable inputs, including:

- Using recent arm's length market transactions;
- Reference to the current fair value of similar instruments; and
- Discounted cash flow analysis, pricing models or other techniques commonly used by market participants

Level 3 Valuation techniques, as described for level 2 above, for which not all inputs are market observable prices or rates. Such a financial instrument is initially recognised at the transaction price, which is the best indicator of fair value, although the value obtained from the relevant valuation model may differ. The difference between the transaction price and the model value, commonly referred to as "day one profit or loss', is either amortised over the life of the transaction, deferred until the instrument's fair value can be determined using market observable inputs, or realised through settlement.

The valuation techniques in level 2 and level 3 use inputs such as interest rate yield curves, equity prices and currency prices/yields, volatilities, and the correlation between inputs. The models used in these valuation techniques are calibrated against industry standards, economic models and against transaction process, where applicable.

Valuation methods and assumptions:

Principal book portfolios are held at amortised cost. The balance at the end of the period is calculated based on the expected future cash flows which are adjusted for risk as it takes historical cash flows into account to predict forecasted cash flows. The fair value of principal book portfolios is determined by adjusting the discount rate from the credit-adjusted effective interest rate to a current market related discount rate of 18.50% (31 March 2025: 15.81%; 30 September 2025: 15.93%) and adjusting the expected cash flows for risk. The fair values determined on this basis approximates the carrying value.

The fair value of interest-bearing liabilities is calculated based on future cash flows, discounted using a forward rate curve plus a valuation margin. The valuation margin is a consensus margin at which deals with similar remaining cash profiles could be secured in the market at the valuation date.

The carrying value of trade and other receivables, other investments, cash and cash equivalents, trade and other payables and bank overdrafts approximates fair value as they are short-term in nature and not subject to material changes in credit risk and fair value.

6 Financial risk management continued

6.3 Fair value disclosure continued

Fair values of financial instruments measured at fair value through profit and loss

Financial assets that do not meet the criteria for being measured at amortised cost or fair value through other comprehensive income are measured at fair value through profit and loss. Certain purchased book debts (other financial assets) are managed on a fair value basis.

The value of the purchased book debts managed on a fair value basis may change over time through the collection of underlying amounts that did not form part of the initial ring-fenced purchased book debt. The quantum of the return is also impacted by the quality of the collection services performed, rather than services associated with normal lending arrangements. On this basis, therefore, the cash flows collected on these books do not present solely payments of principal and interest on the principal amount outstanding.

Valuation methods and assumptions:

Other financial assets: The valuation of other financial assets is based on the estimated future cash flows, discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. These represent the significant unobservable parameters applied in the fair value model. The group estimates the expected cash flows by considering all the contractual terms of the financial instrument. The discount rate of 16% (31 March 2025: 12.93%; 30 September 2025: 16%) applied to the expected future cash flows reflects specific risk premiums relating to the asset and is based on the purchase-price average credit-adjusted effective interest rate (CAEIR) for unsecured loan books purchased in the last two years.

Other investments: The value of money market investments is determined by fund managers on a net asset value basis, which is the total value of all the assets in the portfolio including any income accrual and less permissible deductions from the portfolio divided by the number of participatory interests in issue. Unit prices are calculated by fund managers and published daily.

7 Segment report

The Nutun group, has defined its operating and reportable segments to reflect its operating structure and internal reporting framework. Segmental reporting to the executive committee (who is considered the Chief Operating Decision Maker (CODM) in terms of IFRS 8) is organised based on the nature of the business units, which are split into:

Nutun South Africa

- Focuses exclusively on collections and recovery services for clients in South Africa, both as a principal through the acquisition of unsecured non-performing loan (NPL) portfolios and as an agent on behalf of clients in the financial services, specialist lending and retail sectors.
- Revenue is mainly derived from debt collection and recovery services.

Nutun International

- Specialises in business process outsourcing (BPO) customer engagement services, including customer acquisition and retention customer experience, and collections and recovery services for clients located in the United Kingdom, the United States and Australia.
- Revenue is derived from fee-for-services and collection services.

Group core results

Nutun assesses its performance using core earnings, an alternative non-IFRS profit measure, alongside IFRS profit.

Non-IFRS measures are not uniformly defined nor used by all entities and may not be comparable with similarly labelled measures and disclosures provided by other entities. Management considers that core earnings is an appropriate alternative performance measure to enhance the comparability and understanding of the financial performance of the group. The Group has set out its policy to calculate core earnings below.

Core earnings is calculated by adjusting basic earnings for headline adjustments and the following:

- Once-off transaction costs which are directly attributable to corporate activity (primarily legal and consulting fees).
- Adjustments on put and call options over non-controlling interests, namely imputed interest on the put option liability, re-measurements of the put option liability and fair value adjustments on the call option derivative.
- Once-off or accelerated items, where these are reasonably expected not to re-occur in the ordinary course of business in future reporting periods.
- Adding back specified headline earnings exclusions, if the gain/loss is considered part of Nutun's normal operations.

These adjustments are considered annually based on the transforming nature of the group. Management is responsible for the calculation of core earnings and determining the inclusions and exclusions in accordance with the policy. The Nutun audit and risk committee reviews the core earnings for transparency and consistency. The reconciliation of basic (loss)/earnings, and core (loss)/earnings is included in this segment report.

7 Segment report continued

Group core results continued

The CODM view of the Nutun South Africa segment reflects the manner in which the CODM measures the segment for the purpose of allocating resources and assessing its performance. Under the CODM view, purchased book debt collections are included in the revenue number, and the amortisation of the purchased book debts are reflected in cost of revenue. Adjustments are reflected in the table below to reconcile the CODM view to the IFRS reporting. In terms of IFRS reporting, collections are taken into account in the movement of the amortised cost on the statement of financial position, and the income statement therefore reflects interest revenue and impairment gains/(losses).

8 Going concern

The condensed consolidated financial statements were prepared on a going concern basis. Based on their assessment, the directors have no reason to believe that the group will not continue as a going concern for the foreseeable future. This assessment included an assessment of the relevance of its business models, the nature of the primary assets and the cash flows generated from these assets as well as the group's balance sheet.

9 Subsequent events

The directors are not aware of any material events occurring between the end of the reporting period and the date of approval of these financial statements that would require adjustment or disclosure in terms of IAS 10 – Events after the reporting period.
